

# IS YOUR HOME SAFE?

Badly fitted or poorly maintained gas appliances can put you and your family at risk of gas leaks, fires, explosions and carbon monoxide poisoning.

Thousands of homes inspected by Gas Safe Register have unsafe appliances because they have not been checked regularly. Are you willing to take the risk?

Visit [www.staygassafe.co.uk](http://www.staygassafe.co.uk) to see where unsafe appliances have been found near you.

# Keep your home safe

Stay safe: ensure your gas appliances are working correctly and safely by getting them checked every year by a Gas Safe registered engineer.

Make sure you don't forget by setting up a **free reminder** at [www.staygassafe.co.uk](http://www.staygassafe.co.uk) Just tell us when you'd like to be reminded to book a check and we'll send you an email or text reminding you to contact an engineer.

Remember to make sure the engineer you use is Gas Safe registered and qualified for the work you need doing. You can find or check an engineer at [www.GasSafeRegister.co.uk](http://www.GasSafeRegister.co.uk) or by calling **0800 408 5500**.

**Always ask to see their Gas Safe ID card.**

Gas Safe Register is the official list of gas engineers who are qualified to work safely and legally on gas appliances. By law, all gas engineers must be on the Gas Safe Register, which replaced CORGI registration.
